

Height Adjustable Mailroom Tables

A height adjustable work table is an ergonomically correct solution for those busy mailroom layouts. These tables adjust from 29" to 38" high with the ease of a crank handle which incorporates precision steel gears and transmissions for a maintenance-free operation and smooth adjustments. To keep the work area safe, the handle neatly tucks away under the

work surface when not in use. This convenient table design can be incorporated into all mailroom layouts for the flexibility of raising or lowering the work surface to accommodate the individual working at that station at any given time. The height adjustable table is available in two sizes and has a cohesive appearance to all Dehnco mailroom components.

1. Crank Handle

The crank handle is located under the table surface and can be tucked away when not in use. When height adjustments are required, the crank handle pulls out and can easily be manoeuvred to adjust table to the desired height. When completed, push crank inward and turn handle towards the back of the table for safe storage.

2 & 3. Table Adjustment

These photographs demonstrate the height adjustment of the table at a low and high elevation. The adjustment gears are enclosed within the leg panels, with hand crank assembly in upper left or right leg mounting channel, as required.

A steel rod mechanism provides the power transfer between the left and right height adjustable legs.

Our height adjustable work tables can withstand up to 500 lbs and are manufactured with a four piece steel frame. Nylon levelling glides are included and have a 1" adjustability to assist in levelling out your table. These adjustable tables are available in two standard sizes 45-1/2" and 68" wide and are both 33" deep. These sizes accommodate all mailroom parts such as our riser and sorter components.
