

Modular Tables

Modular tables are our most popular mailroom table design as it has been manufactured with strength and durability by utilizing a 4 post leg construction with side and back panels. This heavy-duty table can be outfitted with a storage shelf and lockable sliding doors. Storage below the work surface allows you to hide away messy boxes, packaging material and miscellaneous office supplies, while keeping your mailroom space organized and uncluttered. These accessories allow you to design a workstation to accommodate your specific mailroom requirements. Modular tables are available in three sizes adjusting from 29" to 36" high and can withstand loads up to 1500 lbs. All mailroom components can be added to the modular table and stacked for maximum sorting capability. Sorters can be stacked up to two units high on the table surface and can be used with one of three size risers available. A riser can be used to lift sorting modules off the table surface to leave space for machines, work space, packaging materials and boxes etc.

As outlined in the photograph on the left, all three table variations are shown. One modular table without storage, one table with a storage shelf and one table with storage shelf and lockable sliding doors. The modular table design is universal and can work with many mailroom layouts required to accommodate your unique space.
